

# Spraoi Coach + Journey Implementation Specification

---

Version 1.0 • August 2026

## 1. Locked architecture decision

Skills are the spine. Activities, Challenges, Videos and Progressions link to a Skill. Coach and child experiences are separate views of linked content, not duplicate records.

***SKILL → Activities (coach) + Challenges (child) + Videos + Progressions + Metadata***

---

## 2. Content types

| Type     | Purpose                                            | Audience |
|----------|----------------------------------------------------|----------|
| Skill    | Canonical concept such as Jab Lift                 | Both     |
| Activity | Coach drill/game/warm-up with full delivery detail | Coach    |

|                   |                                                |                       |
|-------------------|------------------------------------------------|-----------------------|
| Challenge         | Short measurable home-practice task            | Child                 |
| Video             | Demonstration or explanation linked to a Skill | Coach / player / both |
| Skill progression | Directed relationship between skills           | System and coach      |

### 3. Weekly plan

| Field            | Rule                                                         |
|------------------|--------------------------------------------------------------|
| Scope            | Per club, age group, season and week number                  |
| Mode             | hurling_only / football_only / both                          |
| Focus Skills     | One per selected sport                                       |
| Athletic focus   | Optional in every mode                                       |
| Sessions         | Numbered Session 1, Session 2, Session 3; never day-named    |
| Default duration | 60 minutes                                                   |
| Homework         | One challenge per selected sport plus optional athletic task |
| Publishing       | System suggests; coach confirms                              |
| Sharing          | Read-only link; no login required                            |

### 4. Mode picker

| Mode          | Sessions                                  | Homework                                            |
|---------------|-------------------------------------------|-----------------------------------------------------|
| Hurling only  | All sessions hurling                      | 1 hurling challenge; optional athletic              |
| Football only | All sessions football                     | 1 football challenge; optional athletic             |
| Both          | Coach mixes hurling and football sessions | 1 hurling + 1 football challenge; optional athletic |

### 5. Session formats and timing

| Format   | Behaviour                                                                                                       |
|----------|-----------------------------------------------------------------------------------------------------------------|
| stations | Numbered stations. Remaining time = (total duration - warm-up) / station count. Each station may be overridden. |
| sequence | Ordered activities with individual timings.                                                                     |
| game     | Single activity or game-focused session.                                                                        |

Both weekly sessions should reinforce the same selected focus Skill for that sport while allowing different Activities for variety.

### 6. Database tables

| Table              | Core relationships                                   |
|--------------------|------------------------------------------------------|
| skills             | Parent entity for content                            |
| activities         | Primary skill_id; optional secondary skills join     |
| challenges         | skill_id                                             |
| videos             | skill_id and audience                                |
| skill_progressions | from_skill_id → to_skill_id                          |
| weekly_plans       | club, age group, season, week, mode and focus skills |

|                    |                                                            |
|--------------------|------------------------------------------------------------|
| sessions           | weekly_plan_id, number, sport, format and duration         |
| session_activities | session_id, activity_id, station/order and timing override |
| player_progress    | player, challenge, week and completion state               |

## 7. Controlled values

| Field          | Allowed values                          |
|----------------|-----------------------------------------|
| sport          | hurling / football / athletic / multi   |
| difficulty     | foundation / developing / advanced      |
| format         | drill / game / warm_up / cool_down      |
| weekly mode    | hurling_only / football_only / both     |
| video audience | coach / player / both                   |
| content status | draft / in_review / approved / archived |

## 8. Activity import contract

Every Activity must have exactly one primary Skill name that matches the skills table exactly. Import batches are JSON arrays. Equipment is lowercase comma-separated text. Age groups use exact labels such as U7, U8 and U9.

Required Activity fields: title, skill, secondary\_skills, sport, category, age\_groups, difficulty, format, duration\_mins, players\_min, players\_max, equipment, area\_size, indoor, outdoor, description, coaching\_points, setup and diagram\_description.

## 9. Challenge import contract

Required Challenge fields: title, skill, sport, age\_groups, difficulty, level, duration\_mins, description, target and video\_url. Challenges are authored per Skill, not copied from each Activity.

## 10. Search and filtering

- Primary Skill and secondary Skills.
- Sport and category.
- Age groups.
- Difficulty and format.
- Player range and duration.
- Equipment and area size.
- Indoor/outdoor suitability.

## 11. Coach workflow

1. Create weekly plan and select Hurling only, Football only or Both.
2. Select focus Skill(s).

3. Create numbered sessions.
4. Choose session format.
5. Search Activities linked to the focus Skill and add preferred drills.
6. Review calculated timings and override where needed.
7. Review suggested child Challenge(s).
8. Confirm and publish.
9. Share read-only mentor link.

## 12. Journey workflow

10. Read the published weekly plan.
11. Display one Challenge for each selected sport focus.
12. Display optional athletic task if confirmed.
13. Show short explanation, how-to steps, target and player-facing video.
14. Allow the child to mark the Challenge complete.
15. Store completion in player\_progress.

## 13. Source governance

- Keep source URL and source title internally.
- Rewrite source material into original Spraoi Sports language and design.
- Do not expose third-party branding on public cards unless required.
- Mark ambiguous imports for review rather than inventing unsupported details.
- Use status and version fields from day one.

## 14. v1 boundaries

- No auto-assembled sessions from tags.
- No AI session suggestions.
- No parent verification.
- No badges or achievements.
- No formal assessment framework.

## 15. Delivery package

This package includes import-ready JSON seed libraries, source tracking, SQL schema and the locked brand assets. Future batches should use the same file contracts and controlled vocabulary.
